STORAGE OF DRY BULK PESTICIDES

PESTICIDE & FERTILIZER BMP #4

Photo courtesy of Creative Commons

Description: Store dry bulk pesticides, including insecticides, herbicides, fungicides, rodenticides and nematocides, in a way that protects water quality.

AWQA Minimum Requirements:
Dry bulk pesticide storage shall be separated from other containment areas by a six (6) inch curb that extends at least two (2) feet beyond the perimeter of the walls of the storage container. Store in a dry, secure, ventilated area. Locate new storage facilities 100 feet minimum away from on-site wells and sinkholes, 200 feet from private domestic wells, 200 feet from springs and cisterns, and 400 feet from open-throated sinkholes and perennial streams. You can find the definition of a sinkhole in 401 KAR 5:002 where it states that a “sinkhole” means a naturally occurring topographic depression in a karst area. Its drainage is subterranean and serves as a recharge source for groundwater. It is formed by the collapse of a conduit or the solution of bedrock. An open-throated sinkhole is a sinkhole with an internal opening or drain, including a cave, proto-cave, conduit, sub-conduit, or fissure, leading into the subsurface through which water and other materials can pass from the sinkhole into underlying solutional voids and conduits. Open throats may be air-filled or water-filled.
